What’s coming in Adobe Audition

Sound Remover
Easily remove specific audio elements with just a few clicks. Select a sample of the unwanted sound; Sound Remover will scan the entire clip and remove that element from the recording. Repair or restore dialogue and production audio and deliver brilliant results faster.

Preview Editor
Confirm your edits before you commit. Preview Editor offers a versatile new split-screen view where you can visually compare effects results and view multiple sections of a file simultaneously. For example, you can compare different regions of a clip or zoom in on a selection (without losing your place in the main window) to confirm time-stretching before applying changes.

Enhanced multitrack editing
New color coded tracks, automatic crossfades and clip merging, and many other enhancements make for an even more efficient multitrack environment. Clear and comprehensive clip handling, manipulation, and grouping tools save time by letting you craft large multitrack projects quickly, apply edits and effects to multiple clips, and easily organize audio within projects.
